

FOR IMMEDIATE RELEASE

**VIDIENT AND INTERGRAPH TEAM ON NEW SECURITY SOLUTION
THAT PROVIDES FULL SITUATION AWARENESS OF PUBLIC FACILITIES**

*Partnership Unifies Facility-wide Security Operating Picture,
Speeds Responses to Security Incidents*

SUNNYVALE, CA – June 12, 2006 –Vidient Systems, Inc., a developer of intelligent video surveillance and analysis software that detects security breaches in real time, announced today that it is partnering with Intergraph Corporation (NASDAQ:INGR), a leading provider of Spatial Information Management (SIM) software, to integrate Vidient SmartCatch™ with Intergraph’s integrated command and control system to provide public security personnel full situation awareness of their facilities.

With the integration of Vidient’s intelligent video surveillance technology and Intergraph’s large-scale command and control solutions, security personnel now have access to a single, simplified visual security operating picture of their entire facility, from perimeters to external vehicle entrances and parking areas to various employee and customer access points. The new integrated solution provides incident command, spatial awareness, advanced behavior recognition and incident management. This new capability provides real-time detection of security breaches, accelerates response times to incidents and streamlines coordination and management among the full range of safety and security agencies involved.

Intergraph Corporation is recognized as a leading global provider of public safety and security software that enables security and public safety organizations to rapidly detect and respond to critical incidents. Vidient brings to the Intergraph platform an intelligent video capability in which a customer’s network of CCTV cameras can monitor and recognize specific pre-programmed ‘behaviors’ of people and objects that breach the facility’s security policies.

“Increasingly, it’s the integration of new technologies that is providing today’s greatest breakthroughs in ensuring the safety and security of our public facilities,”

(more)

said Brooks McChesney, president and CEO of Vidient Systems, Inc. “Our partnership enables intelligent video surveillance behavior recognition and analytics to be fully integrated with Intergraph’s globally recognized security command and control system providing our customers full, real-time situation awareness of their facilities.”

“We provide our customers the ability to see all their security-related data in a single-operating picture that is easily shared in real-time with all the public safety and security agencies involved in response to various incidents,” said Robert H. Scott, Director, Security, Government & Infrastructure, Intergraph Corporation. “Now, through our partnership with Vidient, our customers can enhance that operating picture with real-time video information from locations throughout their facility that gives them the ability to recognize threatening behaviors as they are happening and the opportunity to proactively interrupt potential security breaches.”

Through the partnership, Intergraph will integrate Vidient SmartCatch intelligent video surveillance and analytics software with its command and control solutions. Intergraph’s software links incident command, spatial awareness, intelligent video, employee identification and multiple sensors into a single system and integrates with multiple security networks. SmartCatch behavior recognition software makes CCTV cameras smarter and more accurate, enabling them to recognize suspicious, threatening behaviors as they occur and then sending real-time alerts to pre-designated security and safety personnel and organizations.

Vidient SmartCatch 2.5 is now in use around the world in major corporations and public facilities as well as major international and regional airports, including Tallahassee Regional Airport, where it is part of the TSA-funded ‘Airport of the Future’ integrated airport-wide security system, San Francisco International, San Diego International and Salt Lake City International. SmartCatch is available worldwide through a network of channel partners across North America and a global marketing and distribution agreement with NEC.
